

## **Bring slideshows to mobile audiences with Mobilecast for MS PowerPoint**

### **Summary:**

Massachusetts based Kanda Software Inc. today announced the launch of Mobilecast - The MS PowerPoint Presentations Sharing Solution version 2.0, compatible with iPhone, iPad, and iPod Touch devices running on iOS 4.0 or later. Complete with Evernote integration and the power to let presenters broadcast their presentations directly to remote audiences, this app ensures no one misses out on a conference, meeting, or lecture simply because they can't attend in person.

### **Body:**

Newton, Massachusetts – Kanda Software, a leading software solutions firm, has today announced that version 2.0 of Mobilecast - The MS PowerPoint Presentations Ssharing Ssolution is now available on the Apple App Store. The app was developed to give presenters the power to broadcast individual slides and entire presentations directly to remote audiences equipped with iOS and other platforms. New additions to Mobilecast include unlimited slide sharing capabilities, Evernote integration, and automatic slide progressions which enable users to follow presentations remotely in real-time. Mobilecast for PowerPoint® version 2.0 is now available for download on the Apple App Store for \$1.99 in the Productivity category.

To start broadcasting Microsoft® PowerPoint® slides out to selected iPhone, iPad, or iPod Touch devices presenters simply need to install the free Mobilecast plug-in from Kanda's web site onto their personal laptop/ desktop and start PowerPoint®. Once the *Mobilecast* icon on the PowerPoint menu bar is clicked the app is good to go. With Mobilecast activated, slides from the presenters' PowerPoint window will appear on authorized mobile devices within seconds. There are no extra hurdles to jump through, no emails or attachments to open, and no added hassle. The plugin is compatible with both PowerPoint® 2007 and PowerPoint® 2010, and can send slides to an Evernote account as well as to mobile devices.

*"In today's world where nobody has time to open attachments the instant view of that all-important slide can make the difference between a successful launch and a missed opportunity"*

**-- Alex Karpovsky,**

CEO of Kanda Software

Remote audience members can forward slides directly to their Evernote notebook for future reference. The number of slides audiences can receive and hold is restricted only by the space they have on their device. Version 2.0 of the app now makes it possible for remote audience members to not only receive individual slides in real-time but follow entire presentations live as well. This means that whenever the presenter switches between slides the new slide will automatically be sent to remote followers.

Mobilecast Microsoft® PowerPoint® by Kanda Software Inc. represents a revolution in how users experience presentations, utilize PowerPoint, and connect with one another to share information as a whole.
